WIRELESS INTERNET BACKUP

Frequently Asked Questions

1. How will my business benefit from Wireless Internet Backup?

Wireless Internet Backup allows your business to continue operating in the event of an unexpected outage. You'll be able to manage transactions through your point-of-sale system, send or receive critical files, use cloud-based applications, run an e-commerce website and more.

2. How does Wireless Internet Backup work?

You can add Wireless Internet Backup when you sign up for Spectrum Business Internet and an expert technician will install and configure your new services. Wireless Internet Backup comes with everything you need to keep your business running—including a backup modem with two SIM cards, a separate battery backup and an external LTE antenna that automatically picks the strongest connection.

When a network disruption occurs, your backup connection will kick in automatically, provide unlimited data usage for 8 hours or more and run up to 4 mission-critical business devices like a point-of-sale or security system, laptop and printer.

Note: Static IPs (including IP-based services) are unavailable when the backup modem is using LTE. To ensure proper operation, do not add a firewall to your system and do not disconnect or reconfigure the backup modem.

3. What do I need to do if the power goes out?

Nothing! Your Wireless Internet Backup activates automatically—so there is no downtime. You'll receive a text notification when your backup system is in use and again once your normal service is restored. After your network connection resumes, your critical devices will immediately revert back to the primary network and power source.
